

# Senior Engineer

Join a hard core, super cool , intelligent team responsible for automation of tech through Machine learning & AI... Sydney CBD based, immediate start! Interested? Read on

## The role:

Reporting to the CTO, you will be responsible for the support and development of several new applications, products and features that provide software as a service that will allow businesses to provide customized services to customers and prospects as individuals, communicating with them along a bespoke-built workbench that will allow real-time transactions to occur through a unique digital environment between clients and vendors.

## About FlamingoAI:

Based in US and Australia, Flamingo Ai is an Enterprise SaaS company in the Artificial Intelligence (AI) field. We provide a Machine Learning platform used to deploy Intelligent FAQ & Knowledge Retrieval Assistants and Intelligent Assistants for simple to complex workflows for customers and employees. We also offer a Data Science as a Service Business Analytics service.

Flamingo Ai has built its own unique IP and differentiators include: aggressive (fast) learning algorithms, white box auditable AI, AI applications designed for business people, deep expertise in financial services, customer and employee experience focus, high levels of security and accreditation (Flamingo Ai is SOC2 Type 2 certified and PCI Compliant), ability to integrate into legacy systems and state-of-the-art technology architecture. Flamingo is one of IT Analyst Gartner's 'Cool Vendors' and clients include large financial services firms.

## Your responsibilities:

Responsible for the automation of this interface through machine learning robots and algorithms. You will also build SaaS APIs and interfaces to the platform and software as a service, maintain the deployment operationally, implement tools to improve working efficiency and be responsible for scaling the technology.

This role leads from a hands on approach, an inhouse team of developers, and works closely with co-sourced vendors & implementation partner teams to grow the company through delivering technology solutions to our clients in a scalable manner, to achieve the company's strategic goals

Your role will consist of the following three core areas: -

1. Directing, and working on software development projects
2. Producing, testing & Debugging Code
3. Hands on leading a small team engineers and developers

To be considered for this role we need (at least the essential parts....):

### Essential Experience

- PCI Compliance, Penetration Testing, Security Infrastructure
- Node.js and JavaScript
- React/Reduc=x
- MySQL, Linux, Apache and dynamic HTML
- Cloud Services, Docker, Kubernetes
- Self-starter with a proven strong work ethic
- Ability to show motivation and excitement by technology
- Proactivity in identifying holistic approaches to technical problems
- Technical strength in building sustainable, high quality solutions
- Unit testing and automation
- Strong communication
- Collaborative leadership experience

### Desirable Experience

- Messaging and Event Processing
- Working knowledge of Machine Learning and AI concepts
- Java, XML, API/web-services, C/C++, Objective C
- SCRUM/Agile
- Commercial acumen
- Data mining and analytics
- UX and design experience

Sounds like something to sink your teeth into?

Don't delay, send your CV & covering letter to:

**Di Holmes, Head of People & Community**
